

## Task

- Read the image description in docker hub:  
<https://hub.docker.com/repository/docker/brunoteleginski/node-session-4-task>
- You should deploy a pod with a configmap according the image description
- Set the environment variables according the image description (you can set whatever values for envs)
- When entering in the path “**/test**” of the application, you should see all the configmap values and the environment variables printed out.
